| <p style="text-align: center;">Catalogue of type specimens. 3. Entomology</p> |
|---|

The UUZM catalogue of type specimens is issued in four parts:

1. C.P.Thunberg (1743-1828), Insecta
2. General zoology
3. Entomology (this part)
4. Linnaean specimens

The groups 'Myriapoda' and Symphyla are included in part 2 of the catalogue although they are generally referred to 'entomology'.

Naturally, the size of the type collection will increase in connection with new contributions but also with the 'discovery' of disregarded old type specimens not yet transferred from the general collections. Revised versions of the catalogue will successively be available.

CONTENTS:

- Introduction, *p. 1*.
- List of protologues (published articles giving descriptions of new species), *pp. 3-20*.
- Alphabetically arranged list, *pp. 23-55* (type specimens grouped in:)

Arachnida / Araneae
Arachnida / Opiliones
Arachnida / Pseudoscorpiones
Coleoptera
Collembola
Diptera
Heteroptera
Homoptera
Hymenoptera

This is a revised version 4 of a list compiled by **Lars Wallin**.

Date of issue: 2001/04/05 (version 1 issued 1994/01/20).
